House Guide · Worth Matravers

Heating

1. Heating is by digital storage heaters — each one quietly charges up overnight using cheaper off-peak electricity, then releases that heat through the day.
2. Each heater has a display and a dial, just like a normal thermostat: rotate the dial to set your desired room temperature (21°C is a comfortable default) and the heater takes care of charging and heat release automatically.
3. They can feel cool in the morning and warm up through the day — that's normal, not a fault.
4. If a room needs to be warmer quickly, press **Menu** then select **Boost** for a temporary top-up.
5. Full manufacturer's manual is in the sideboard drawer under the TV if you'd like more detail.

Hot Water

1. The showers are electric and produce hot water on demand — no need to plan ahead for those.
2. For hot water for the **bath and sinks**, this comes from a hot water tank. If you need extra, press the **boost button in the cupboard under the stairs**.

Bins & Recycling

1. **Rubbish & recycling** — alternate Tuesdays (one week rubbish, the next recycling).
2. **Food waste** — every Tuesday.
3. **Garden waste** — alternate Thursdays.
4. A printed timetable with exact dates is on the side of the fridge in the utility room.
